PROFESSIONAL SUMMARY

B.E. Information Science Engineering student and software engineer building smart, scalable full-stack solutions that turn complex ideas into intuitive digital products. Skilled across the data science lifecycle — data pipelines, model training, API deployment, and production integration — with strong full-stack engineering fundamentals. Currently seeking Data Science and AI/ML roles to apply machine learning, Python, and analytical problem-solving to real-world challenges.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript
- **Frontend Technologies:** React, CSS, Next.js, Three.js, HTML
- **Backend Technologies:** Node.js, Express.js, MongoDB, API Design, API Integration
- **AI/ML:** NLP, Machine Learning, Computer Vision, YOLO, Generative AI

EXPERIENCE

Data Scientist Intern — Gen AI | Global Quest Technologies

Jan 2026 - May 2026

- Applied machine learning concepts including supervised learning, classification, regression, feature engineering, model evaluation, and hyperparameter tuning. Developed end-to-end AI solutions using Python, Pandas, NumPy, Scikit-learn, TensorFlow, and PyTorch.
- Built a currency forecasting module (ARIMA/LSTM with TensorFlow.js) for educational rate prediction, integrated into a Next.js dashboard.

PROJECTS

3D Virtual Garden Builder

React, Three.js, YOLOv5, Node.js, Express, MongoDB

- Developed a full-stack monorepo platform enabling real-world garden image uploads, Trained and deployed a custom YOLOv5 computer vision model for plant recognition (90%+ model accuracy), and digital recreation through interactive 2D/3D visualization workflows.
- Engineered the **bot**/module integrating computer vision inference, image processing pipelines, and an AI chatbot for real-time plant analysis, health diagnostics, and intelligent garden assistance.
- Built drag-and-drop and snap-to-grid layout systems within a custom Three.js rendering engine; designed a Node.js + MongoDB backend to persist digital twin data, user layouts, and detection metadata.

AI Medical Orchestration System

MERN, Python, FastAPI, PostgreSQL, Machine Learning

- Developed an intelligent healthcare orchestration platform enabling AI-assisted symptom analysis, medical report processing, doctor-patient coordination, appointment workflows, and emergency prioritization systems.
- Engineered scalable backend services and secure REST APIs for patient management, medical history tracking, report uploads, real-time communication, and multilingual healthcare interaction workflows.
- Designed modular full-stack architecture integrating authentication, triage routing, risk assessment pipelines, follow-up monitoring, and cloud-ready healthcare data management systems.

Cryptex Chat — AES-Based Text and File Encryption

React, JavaScript, AES (Web Crypto API)

- Built a full-stack secure encryption platform (React + TypeScript + Express) supporting text and multi-format files with intelligent intent parsing and guided UX for encrypt/decrypt workflows.
- Implemented AES-256-GCM with scrypt key derivation, authenticated payload format (salt + IV + auth tag + ciphertext), legacy PBKDF2 compatibility, and side-channel-aware failure behavior.

CERTIFICATIONS

Generative AI Workshop — IIT Hyderabad

Intensive 2-day workshop on LLMs, prompt engineering, and generative AI applications.

Hackathon Coordinator (Volunteer) — Hackfinit, Hackverse Hackverse Hackverse

Hackathon Participant — Hack 4 Mysore, Prahyatha'24, Invaders

- Cisco Python Essentials I & II • Microsoft Power BI • Next-Gen AI Tools Workshop (Google DSC)

EDUCATION

B.E. — Information Science and Engineering, Maharaja Institute of Technology, Mysore
CGPA: 7.8

2022 – 2026

Pre-University Course (PUC), Sharadha Vidya Mandir, Mysore — 78%

Secondary (CBSE), DAV Public School, Mysore — 72%

LANGUAGES

- English • Kannada
