HITESH SURYA THEJASWI M

AI ENGINEER | PYTHON | MACHINE LEARNING & GENERATIVE AI

+91 9353134049 | hiteshsurya018@gmail.com | GitHub | LinkedIn | Portfolio

Professional Summary

2026 Information Science and Engineering graduate with Data Science and Generative AI internship experience. Hands-on experience building Python-based AI applications, machine learning workflows, Retrieval-Augmented Generation (RAG) systems, and computer vision solutions. Skilled in Python, SQL, Pandas, NumPy, Scikit-learn, PyTorch, TensorFlow, LangChain, Hugging Face Transformers, and FastAPI. Strong foundation in data preprocessing, model development, evaluation, and integrating AI capabilities into applications.

Technical Skills

Programming: Python, SQL, Pandas, NumPy
AI & Machine Learning: Supervised Learning, Regression, Classification, Scikit-learn, PyTorch, TensorFlow, YOLO, Model Evaluation
Generative AI: LLMs, RAG, LangChain, Hugging Face Transformers, Sentence Transformers, FAISS, FLAN-T5, Embeddings, Semantic Search
AI Development: Data Preprocessing, Feature Engineering, Prompt Engineering, Model Integration, REST APIs
Backend & Database: FastAPI, PostgreSQL, Streamlit
Development Tools: Git, GitHub, Docker, CI/CD, OpenAI Codex, ChatGPT, Claude

Experience

Data Science and Gen AI Trainee **Feb 2026 – May 2026**
Global Quest Technologies *Bengaluru, India*

- Developed a currency forecasting workflow using **ARIMA and LSTM**, integrating model predictions into an interactive dashboard.
- Used **Python, Pandas, NumPy, and Scikit-learn** for data preparation, feature engineering, and supervised machine learning experimentation.
- Worked with **TensorFlow and PyTorch** in model-development workflows and integrated forecasting outputs with application components for user-facing visualization.

Volunteer Web Developer **2026**
Rajavasantha Welfare Trust *rajavasanthatrust.org*

- Developed and deployed a responsive organisational website using **Next.js, React, TypeScript, and Tailwind CSS**.
- Integrated **Neon PostgreSQL** and **Cloudinary** for database and media management.
- Implemented a **CI/CD workflow** using GitHub and Vercel for integration checks, build validation, and continuous deployment.

Projects

Multi-Document RAG Research Agent *Python, LangChain, FAISS, Sentence Transformers, FLAN-T5*

- Built a multi-document PDF question-answering system using semantic embeddings and FAISS-based vector retrieval, with local FLAN-T5 generation to produce context-grounded answers supported by evidence-linked citations and relevance-based refusal.
- Implemented evidence ranking, duplicate-chunk removal, and confidence scoring to improve retrieval quality and answer reliability. Developed automated tests covering retrieval and response behaviour; achieved **9/9 passing unit tests**.
- Evaluated the system using **12 questions across 2 documents**, achieving **77.78% supported-answer accuracy**, **66.67% grounding**, **100% refusal accuracy**, and **100% strict Recall@5**.

AI Medical Orchestration and Triage System *Python, FastAPI, PostgreSQL, ML Workflows*

- Developed an AI-assisted medical workflow integrating symptom analysis, medical report processing, and emergency prioritization to support structured patient assessment and decision-support operations.
- Implemented REST API endpoints and PostgreSQL data flows for report uploads, structured patient records, and risk-assessment workflows, connecting backend services with patient and appointment management functionality.

Virtual Garden – AI-Assisted 3D Garden Builder *Python, FastAPI, YOLO, React, Three.js*

- Integrated AI-based plant detection with an interactive 3D garden environment, connecting image-based detection results with the virtual scene by mapping bounding-box coordinates to editable terrain positions.
- Implemented confidence filtering, plant-label validation, duplicate detection, and image-quality checks to improve detection handling and scene consistency.
- Developed interactive 3D editing functionality including plant CRUD operations, undo/redo, and snapping, enabling users to manage and modify plant placements within the virtual garden environment.

Vireo Support Intelligence – Applied Data Science *Python, Pandas, NumPy, Scikit-learn, Streamlit*

- Analyzed support-operation data for a **44-agent operation** using Python-based data analysis, identifying complaint trends, repeat-contact patterns, agent productivity, and inconsistencies in existing support intake tags.
- Developed an interactive Streamlit analytics dashboard to examine operational patterns and communicate data-driven findings across support metrics.
- Identified a **13.06% mature 30-day repeat-contact proxy** in the case-study data against a **10% target**, providing an evidence-based view of repeat-contact performance.

Education & Certifications

Maharaja Institute of Technology, Mysore **2022 – 2026**
B.E. Information Science and Engineering *CGPA: 7.8/10*

Certifications: Cisco Python Essentials I & II | Generative AI Workshop (IIT Hyderabad) | Next-Gen AI Tools Workshop (Google DSC)

Leadership: Coordinated Hackfinity and Hackverse; participated in Hack 4 Mysore, Prahyatha '24, and Invader.
